

About Seenons

Seenons is a tech company founded in 2019 with a mission to bring people together for a waste-free world. Clean technology and smart logistics are used to bring everyone in the waste chain together, to save waste - valuable raw materials!

The Seenons platform and supporting app allows businesses, at just the click of a button, to arrange for their waste to be collected. The waste is matched with a waste processor that upcycles it into new circular products giving it a new life; coffee residues are made into soap and paper and cardboard fibers can be recycled six to seven times. If there isn't a 'match' the technology ensures that waste is taken away in the most efficient and sustainable way, utilizing the existing transport network for maximum efficiency, less traffic and reducing CO2 emissions.

Seenons is a growing Amsterdam based start-up with a 45+ international team of 'waste warriors': currently active across the Netherlands, present in Benelux with plans to expand further into Europe; creating a waste-free world for everyone.
