About Seenons

Seenons is an award-winning tech company with a clear vision: a waste-free world. In Europe alone, 2.5 billion tons of waste is generated each year: 90% of that waste is 'wasted', only 7.2% is re-used*. Meanwhile, the EU has an ambitious target to protect natural resources and become 100% circular by 2050.

The Seenons platform brings together all the organisations in the waste chain, connecting those that create waste with those that re-use it to reduce waste and accelerate the transition towards a circular economy. The only independent platform for saving waste in Europe, Seenons operates in +3000 locations across Benelux, with +235 partners, dealing with +75 different types of business waste. Seenons enables organisations to get in control of their waste, providing the flexibility to choose the best partners and the insights and expertise to start the journey to zero-waste.
